The Future of my Sad Story (?)

- 2005 - Sakai completes and is installed at 20 universities :)
- 2006 - I take a few months, reinvent ClipBoard and integrate it into Sakai so people can *finally* truly use it
- 2007 - Hundreds of people try my idea and it turns out it was a bad idea - so I invent something else…

- Moral: I have been waiting 10 years, and changed three jobs to find a framework to deploy my idea so people could use it. Turns out the only way it was going to happen was to help build it myself.

Sakai
